

**DIRECTIONS:** To aid with thrush and hoof fungus, clean hoof with pick/brush and remove debris. For quickest results keep foot as dry as possible, however No Thrush also works well in wet conditions. Shake bottle to loosen settling. Thoroughly dust frog and be sure to get powder deep **into** all hoof grooves, crevices and **HEEL CRACKS** once daily for 5-7 days. For best results, and to avoid waste, use hoof brush to distribute powder around frog and heel. For deep sulcus (heel crack) thrush and hoof rot continue regular use until heel cracks are regrown. This will typically occur in 20-40 days. The space between the heel bulbs should be a "dimple."

**MAINTENANCE:** To aid in thrush/fungus prevention apply a dusting every 7-10 days as needed.

**CAUTION:** Not for human use. Do not take internally. Avoid contact with eyes. Use in well ventilated area. Asthma sufferers may wish to use a mask.

**SCRATCHES, RAIN ROT, FUNGUS:** Keep the coat /legs dry. Do not wash or remove scabs. Apply once daily.

**INGREDIENTS:** Proprietary mix of multiple natural clays, silicates, salts of copper 15% - active, iron, diatomaceous earth, oregano powder.
