

# Complete Starter Bath Kit

Includes foamer, adjustable spray nozzle, trigger handle, metering tip kit, Green Body Wash Concentrate & Sample size Detangler

It's Safe. It's Easy. It Works.

## Directions:

Select a colored metering tip (3 piece kit included) based on your water pressure. Yellow is for high water pressure, Blue (most common) is for average water pressure and Green is for low water pressure.

Turn the foamer lid assembly over & locate the opening on the underside. Press the small end of the colored tip firmly into the hose barb on the underside of the lid.

Slide the suction tube over the colored tip and hose barb. Make sure the strainer screen is connected to the other end of the tube.

Fill container with eZall® concentrate (do not add water) to desired comfort level.

Attach the spray nozzle to your water hose and turn on the water.

Snap the nozzle onto the foamer lid. You will hear the quick connect lock into place.

DO NOT Wet the animal prior to application of eZall® products. Pre-wetting creates a barrier between dirt and the eZall® product and reduces effectiveness.

Grip and squeeze the nozzle handle to apply the eZall® products as needed. It will appear as light foam or solution with bubbles and dissipate fairly quickly. For face area, apply Total Body Wash to a damp cloth, then gently wipe clean.

Allow product 3-5 minutes to set on surface before rinsing or while cooling (longer for stubborn stains), rinse thoroughly until all released dirt is removed from coat. After foaming on product, disconnect the spray nozzle from the applicator by pulling back on the quick connect (in the opposite direction to release the nozzle). Rinse animal thoroughly.

Rinse Option: Attach 9 position rinse head by inserting head into quick connect nozzle; align the 4 guides and snap into position. Rinse animal thoroughly with 9 position rinse head choosing desired rinse.
