

Silver Ointment contains pure silver which, due to its strongly increased surface area, is capable of releasing silver ions continuously. These ions have an antiseptic effect and can suppress bacterial growth. Inflammations subside, the skin regenerates and calms down. High-grade vegetable oils provide cracked skin with moisture and make it supple. Can also be used for preventive care and protection of pastern against moisture and bacteria. Silver ointment can be used in combination with zinc oxide spray by leovet.
