

This product has been shown to be effective for the vaccination of healthy dogs, cats and horses 3 months of age or older against rabies virus. This vaccine meets the three year duration of immunity requirements for dogs and cats, and one year duration of immunity for horses. For more information regarding efficacy and safety data, go to productdata.aphis.usda.gov.

Dosage and administration:

Dogs and cats: Inject one 1 mL dose subcutaneously or at one site in the thigh intramuscularly at 3 months of age or older. Revaccinate one year later and every 3 years thereafter.

Horses: Inject one 2 mL dose intramuscularly at 3 months of age or older. Revaccinate one year later and annually thereafter. **Do not vaccinate horses within 21 days before slaughter.**

Precautions:

- Store between 2° and 8°C (35° and 46°F). Do not freeze. Shake well before use. Use entire contents when first opened. This product has not been tested in pregnant

Rabies Vaccine

Killed Virus

Rabvac™ 3

This product is restricted for use by or under the supervision of a veterinarian.

For use in dogs, cats and horses only

animals. Do not mix with other products, except as specified on this label. In case of human exposure, contact a physician.

- The use of a biological may produce anaphylaxis and/or other inflammatory immune-mediated hypersensitivity reactions. Antidote: Epinephrine, corticosteroids, and antihistamines may all be indicated depending on the nature and severity of the reaction.
- A local reaction may occur at the injection site following subcutaneous administration.

Gentamicin and thimerosal added as preservatives.
