# THRUSH STOP

**Safe and Effective  
Concentrated Formula**

Net 8 fl. oz.

## Safe and Effective Formula

Contains no formaldehyde (formalin) or other cancer causing agents. Active ingredient bonds to the protein of the hoof for long lasting protection.

**INDICATIONS FOR USE:** SBS Thrush Stop kills bacteria, fungi and yeast that cause thrush and other infections of the hoof wall, sole and frog. Thrush is a disease of horses' hoofs characterized by a thick, black discharge with a foul odor.

**DIRECTIONS:** Clean the hoof thoroughly by removing debris and necrotic material prior to application of SBS Thrush Stop. Apply once a day and continue as needed for best results. For prevention of infection use once a week in a wet environment or once every 2 weeks in dry conditions. SBS Thrush Stop may also be used on the sole and the frog prior to shoeing with pads and silicone.

**CAUTION:** For external use only. Avoid contact with eyes. If contact occurs, flush eyes with water.
