

SOLAR VIZOR SIZING GUIDE

This is **3** Combined Measurements. **NOT** an Arc.

1. Start from the outer corner of one eye and measure **UP** at slight angle to middle of forehead.
2. Continue **ACROSS** along your horse's forehead.
3. Finish by taking the slight angle line **DOWN** to the outer corner of the other eye. This will measure the widest part of your horse's forehead when done correctly.

WARNING: Do **NOT** measure straight across the eyes as the distance will result in a size most likely too small for your horse.

SIZE HEAD MEASUREMENT

MINI		< 10 inches
PONY		10" to 12"
COB		12" to 14"
FULL		14" to 16"
X-LARGE		16" to 17"

NOTE: If your horse is in between sizes, we recommend you going **UP** in size, not Down!

(vs. On the EquiVizor Fly Mask we recommend you go down, not up!)

The Sizing Chart should be used as a guideline to help select the best size for your Horse. The Chart is **not** a guarantee of fit.
