

Equiwinner™

Making Electrolytes Work for Remarkable Health

This package contains an easy to use ten day course of Equiwinner non-transdermal patches. **Instructions are included inside the box.**

This is a veterinary product for use on **HORSES ONLY - NOT FOR HUMAN USE**

Many thousands of horses have been successfully treated over the last ten years, always improving performance and reducing travel and other tensions. Equiwinner patches work by activating body cell signaling to ensure that all of the horse electrolytes are working efficiently. This cannot be done by just feeding electrolytes.

Equiwinner patches contain no banned substances and cannot ever test positive. European Patent EP1656120 and other patents worldwide.
