

Instructions for Treating White Line Disease

1. Clean the bottom of the hoof of dirt and debris.
2. Remove the shoe, if needed to get directly at the affected area of the white line.
3. Using a nail, debride the affected area.

4. Apply a thin line of B Gone White Line Treatment around the white line using the convenient syringe. Put it right on the area where it is needed. Treating healthy areas of the white line will not harm it.
5. Reapply once a week for fabefoot horses or each shoeing cycle for shod horses until hoof wall has completely grown out.

Ingredients: copper sulphate, epsom salts, blycerine, tea tree oil, artifical color, and other active ingredients
