

PRODUCT INFORMATION

Energy Plus

PROFILE

Energy Plus is a source of Amino Acids, Energy, Vitamins and Electrolytes.

INDICATIONS FOR USE

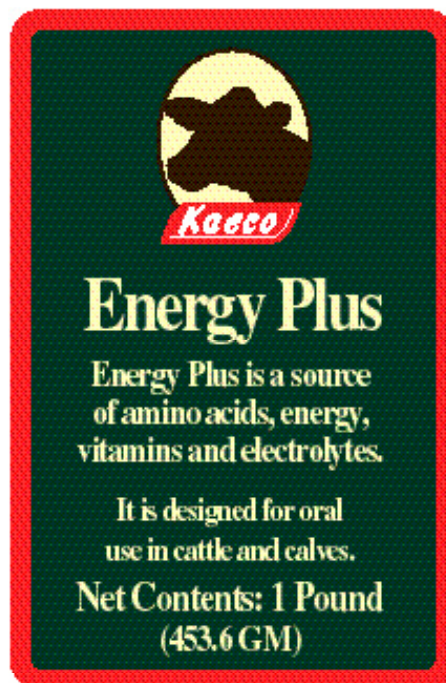

Energy Plus is designed for use in environmentally challenged calves needing supplemental nutrition and energy. It may also be used for cattle that have been shipped long distances.

INGREDIENTS

Energy Plus is a balanced blend of specific nutritional ingredients designed with a unique energy providing action for animals in need of the same. *Energy Plus* has sugars in combination with selected polysaccharides and easy to digest protein sources, along with a source of electrolytes, vitamins and minerals to supplement the comprehensive energy sources.

This unique energy providing formula allows for energy to be released and used by the animal in the fashion most desirable, based upon bodily demands: Fast and quickly absorbed energy from Glucose; Sustained energy from Skimmed Milk Proteins and Whey Proteins; then followed by longer term energy sources from Polysaccharides and Starches. Amino Acids are included as easy to digest protein sources with no digestive breakdown required as with milk.

Nutritional density is enhanced by the inclusion of Vitamins and Minerals. The formula is completed with the addition of a balanced source of Electrolytes, specific for the animal at this time.

DIRECTIONS FOR USE

Give one pound of *Energy Plus* per 500 - 1000 pounds of body weight. Suspend *Energy Plus* in two quarts of lukewarm water and administer through a stomach tube or as a drench. Repeat as indicated. Consult your veterinarian concerning correct drenching procedure. Prepare fresh solution daily.

AVAILABLE IN

1 pound Package – 20 - 1# per Pail
20# plastic pail
