STALL REST

NEW ENVIRONMENTS

FARRIER VISITS

NEW TRAINING PROCEDURES

SOCIAL REGROUPING

You can help identify the situations and environmental changes that trigger alterations in your horse's behavior, so your veterinarian can make recommendations to help manage the problem and provide relief. One potential solution is new Zylkene® Equine.

What equine veterinarians and horse owners are saying:

*"Within five days, the mare went from being a problem in the lessons to being much more mellowed out. The owner called me and said, 'We need more of this product. **It has been a miracle worker for this horse.**'"*

— Dr. Christy Cable, Early Winter Equine

*"The owner said it was a night-to-day difference, like a light switch. The mare did great, and for the following two weeks after being on Zylkene, she never kicked the cast or had any issues. A huge difference. **The client perception was 'phenomenal.'**"*

— Dr. Reese Hand, Equine Sports Medicine and Surgery

Zylkene® Equine is an ideal choice for stress-related behavior problems.

To learn more, talk to your veterinarian.

Relax, you've got  **Zylkene®**

Loading can trigger a lot more than fear.

 **Zylkene®**

Behavioral health is essential to overall health.

Stressful situations are part of life for most horses, from trailering and transport to veterinary visits and new routines.

Stressful situations trigger behavior problems and can make life difficult for horses and their owners. Horses communicate stress externally through stall walking, refusal to work, pawing, kicking, head bobbing, and other changes in behavior and appetite.

What may surprise you is that some events and new situations also trigger internal changes that can negatively affect your horse's overall health and quality of life.

A new option to help horses stay calm in challenging situations.

Zylkene® Equine is a new veterinary supplement for horses with a novel and natural ingredient, a milk protein with calming properties.

Researchers speculated that a substance in mother's milk might be responsible for the state of relaxation newborns experience after nursing. This inspired the discovery of a unique milk-derived protein, alpha-casozepine, with proven calming properties. Alpha-casozepine promotes a sense of relaxation and mental alertness without drowsiness or tranquilizing effects.

Stressful situations can cause changes inside and out.

Zylkene® Equine is recommended for situational stress or behavioral problems in horses and ponies.

KEY FEATURES

UNIQUE: Zylkene® Equine is the ONLY equine supplement containing alpha-casozepine.

BACKED BY RESEARCH for behavior management with two published studies.^{1,2}

PRACTICAL: One product for many situations that cause stress in horses and ponies, on or off the farm, short and long term. No need to buy multiple products for all the stressful situations your horse encounters.

EASY TO GIVE: Administer apple-flavored powder daily at meal time. Your veterinarian will recommend the amount that is appropriate for your horse.

Administer once daily at meal time.
