

CALPHORMIN

For Optimum Skeletal Development and Conformation

CALPHORMIN is unique in that it contains a balanced combination of macro-minerals, trace minerals, amino acids and the added benefit of Sodium Zeolite a bioavailable silicon-containing compound. The foundations for a horses future success can be laid down before it is even born. Ensuring the broodmare has the correct balance of macro-minerals, trace minerals, and amino acids to pass on to her new born, **CALPHORMIN** will give the young horse the best start it can get. Continuing to feed the young, rapidly growing horse **CALPHORMIN** will optimise it's growth and bone development, in a correct and balanced way.

Composition

	Per 120g	Per 1 Kg
Calcium	22,832 mg	190,268 mg
Phosphorous	8,002 mg	66,685 mg
Sodium Zeolite A	10,008 mg	83,400 mg
Methylsulfonylmethane	1,560 mg	13,000 mg
Zinc	578 mg	4,820 mg
Manganese	309 mg	2,573 mg
Copper	100 mg	834 mg
Lysine	12,480 mg	104,000 mg
Amino Acids	5,945mg	49,544 mg

Feeding Instructions

CALPHORMIN should be added to the normal feed ration.

Mare in Foal (months 9, 10, 11): 120g per day.

Lactating Mare: 120g per day.

Weanling (6-12 months): 60g per day.

Yearling: 60g per day.

Two Year Old: 60g per day.

Complementary Feedingstuff for Horses.

Presentation: Pellets 3kg, 10kg

CALPHORMIN provides for the elevated requirements of the essential nutrients needed for optimum skeletal development in young growing horses.

- The principal utilisation of **CALCIUM AND PHOSPHOROUS** in the body is the development of bones and teeth. Horses are more likely to suffer from a lack of Calcium and Phosphorus, than from a lack of any other mineral.
- **SODIUM ZEOLITE** is a bioavailable Silicon-containing compound. Silicon enhances bone calcification and is present in large quantities in connective tissue. Silicon is associated with collagen formation, the fibrous protein matrix which provides support for body structures such as cartilage and bones.
- **LYSINE** is the first limiting amino acid in the diet of growing foals. Inadequate protein or Lysine intake results in decreased growth and development of young animals.
- **ZINC, COPPER** and **MANGANESE**, are essential trace minerals, deficiencies of which are associated with:
 - Increased incidence of Epiphysitis
 - Increased incidence of Developmental Orthopedic Diseases (DOD).
 - Impairment of carbohydrate metabolism and synthesis of Chondroitin Sulphate.
- **MSM** is a source of bioavailable sulphur. Sulphur is needed for the synthesis of connective tissue.

CALPHORMIN

Guaranteed Analysis	Feeding Directions
Crude Protein Min. 12% Lysine Min. 8% Crude Fat Min. 1.90% Crude Fibre Max. 3.80% Calcium Min. 17% Calcium Max. 20.4% Phosphorus Min. 6.6% Copper Min. 800 ppm Zinc Min. 4600 ppm Manganese Min. 2570 ppm	Mare in Foal (months 9, 10, 11): add 4 oz (approx. 120g) per day to the normal feed ration. Lactating Mare: add 4 oz (approx. 120g) per day to the normal feed ration. Young Stock (6 - 12 months): add 2 oz (approx. 60g) per day to the normal feed ration. Yearling / Two Year Old: add 2 oz (approx. 60g) per day to the normal feed ration. 1 half scoop = approx. 2 oz (approx. 60g) 1 level scoop = approx. 4 oz (approx. 120g) BN:090909 MFG:09/2009 Best Before: 09/2011

Ingredients: Dicalcium Phosphate , Calcium Carbonate, Ground Extruded Whole Soybeans, Lysine Hydrochloride, Sodium Zeolite, Copper Amino Acid Chelate, Manganese Sulfate, Zinc Oxide.

* For Animal Use Only * Keep Out of Reach of Children * Store in a Cool Dry Place
