**Helps support immune system
to aid in natural immune response
to parasitic infestation**

Also Used as Pre Event

14.88 Fl oz (440mL)

EPMX is a nutritional supplement that helps fight and EPM infection in horses. EPM is a neurological disease in horses caused by protozoa.

EPM stands for Equine Protozoal Myeloencephalitis. Equine means of horses. Protozoal means from a Protozoa which is a microorganism that is a parasite. Myeloencephalitis means inflammation of the tissues that covers the brain.

EPM occurs when horses are exposed to certain protozoal parasites. Common symptoms of EPM infection are uncoordinated movement of the rear feet worse on one side also lameness issues that come and go often switching sides, changes to gate and lethargy, which means they are very tired, hind end weakness, worse on ground that slopes left to right or front to back. EPM is caused by raising or eating feed or drinking water contaminated by the feces of possums. EPMX helps to kill the parasites causing EPM but it is also good for a pre-race.

DOSAGE: 15cc daily.
