SimpliFly<sup>®</sup> with LarvaStop<sup>™</sup> is a highly palatable feed additive to prevent the development of stable flies and house flies in the manure of treated horses. LarvaStop<sup>™</sup> breaks the fly life cycle by preventing the formation of fly larvae's exoskeletons when they molt (resulting in their death). This product contains no organophosphates and can be used as part of an integrated pest management program. SimpliFly<sup>®</sup> with LarvaStop<sup>™</sup> is a reduced risk pesticide.

## READ ENTIRE LABEL BEFORE EACH USE DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

## DO NOT USE ON HORSES INTENDED FOR SLAUGHTER

Feed the recommended dosage of SimpliFly<sup>®</sup> with LarvaStop<sup>™</sup> to each horse separately to make certain he receives his full portion. This product should be fed top dressed on grain or mixed with the horse's total ration to provide 6.8 mg of diflubenzuron per 100 lbs. of body weight. For an occasional finicky eater who does not accept new feeds readily, mix this product with sweet feed or grain ration.

Start feeding SimpliFly<sup>®</sup> with LarvaStop<sup>™</sup> early in the spring before flies begin to appear and continue feeding throughout the summer and into the fall until cold weather restricts fly activity.

This product contains an insect growth regulator which prevents the development of house flies and stable flies in the manure of treated horses, but is not effective against existing adult flies.

In some cases, supplemental fly control measures may be needed in and around paddocks and buildings to control adult house and stable flies which can breed in other decaying vegetable matter or silage on premises, or that migrate in from other areas.

SimpliFly® with LarvaStop<sup>™</sup> should be used as part of an integrated pest management program aimed at reducing fly populations in the horse's environment. Consult your retailer for program recommendations. In order to achieve optimum fly control, this product should be used in conjunction with other premise and on-animal products as well as good management and sanitation practices.
