

ELECTROLYTE

Solutions Guide

PERFORM 'N WIN®

The ONLY university-tested electrolyte on the market, PERFORM 'N WIN® provides horses with the ideal level of electrolytes to support performance, potentially increasing a horse's stamina by 25%.

Electrolyte Loss: What You Need to Know

- 1) During exercise, horses lose water and three electrolytes: sodium (Na), chloride (Cl) and potassium (K).
- 2) At least 20% of the horse's electrolyte reserves can be lost during performance and recovery.
- 3) These electrolytes must be replaced for exercise to continue or exhaustion and tying-up can occur.

GUARANTEED ANALYSIS

Sodium	1,120 mg/oz	4.06%
Potassium	910 mg/oz	3.27%
Chloride	2,600 mg/oz	9.25%

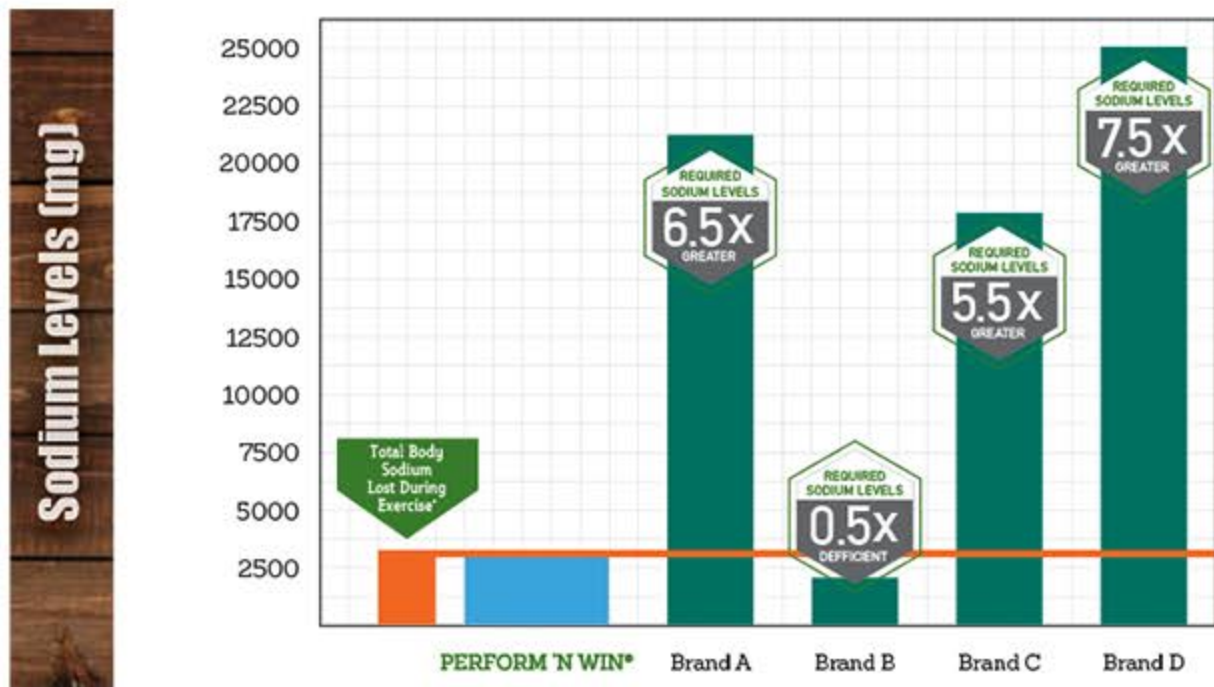

Ingredients

Salt, Potassium Chloride, Magnesium Sulfate, Dextrose, Sucrose, Calcium Citrate, Fumaric Acid, Citric Acid Anhydrous, Silicon Dioxide, Natural and Artificial Flavor.

*Number of days is based on feeding three ounces per day from a 20 lb bucket of PERFORM 'N WIN®.

Sodium Levels in Electrolyte Supplements

When fed at rates for moderate intensity exercise

*Liddinger and Ecker, 2013.

Is Your Electrolyte Doing More Harm Than Good?

Excessive sodium is common in competitive brands of electrolytes on the market today. But did you know that too much sodium can be detrimental to a horse's health and performance? Providing your horse with an electrolyte high in sodium can negatively reduce water and electrolyte absorption, further dehydrating the horse. Symptoms of high sodium intake include colic, diarrhea and muscle weakness. In hot and humid conditions, these symptoms are exacerbated in combination with high sodium intake, further affecting performance ability.

Why PERFORM 'N WIN®

PERFORM 'N WIN® was developed by the University of Guelph located in Ontario, Canada after over three years of research in over 300 performance horses. It is specifically designed to replace electrolytes lost during performance – no more, no less. PERFORM 'N WIN® is completely and rapidly absorbed into the bloodstream to maintain hydration and replenish electrolytes for maximum performance. In fact, the research proves that PERFORM 'N WIN® can prolong a horse's performance up to 34%.
