

SALMON TUNACHOVY

DAILY FEEDING RECOMMENDATIONS

The following are general feeding recommendations. Many factors including age, breed, activity level, and individual metabolism contribute to the need for adjusting portion sizes. Two to four times more food may be required for kittens, gestating cats, and nursing cats. Kittens weighing less than four pounds and/or younger than six weeks should be fed free choice. Spayed or neutered cats may require up to 25% less food.

The following chart provides a good place to start, but determining the correct amount of food for your pet depends upon your evaluation of your pet's overall performance on the amount of food consumed along with any treats given.
