SUMMER GAMES[®]

PLUS Buffered oral electrolyte paste for performance horses

For Oral Supplementation. A normal maintenance intake for horses at rest in hot environments or those being transported in hot weather is 1 tube per day. Horses in moderate to heavy work should receive 2-3 tubes per day. Administer no more than 2 tubes in a single offering. Each tube contains 60 cc.

GUARANTEED ANALYSIS

Per 60 cc Tube Concentration

Calcium (Min.)	200 mg0.2%
Calcium (Max.)	500 mg0.6%
Phosphorus (Min.)	200 mg0.2%
Salt (Min.)	20.0 g23.5%
Salt (Max.)	24.0 g28.5%
Magnesium (Min.)	200 mg0.2%
Potassium (Min.)	4.5 g5.0%
Copper (Min.)	12 mg 141 ppm
Iron (Min.)	62 mg 729 ppm
Manganese (Min.)	4.5 mg 53 ppm
Zinc (Min.)	30 mg 352 ppm

SUMMER GAMES[®] ELECTROLYTE

Oral electrolyte for horses

Summer Games Electrolyte is a dietary electrolyte and trace mineral supplement for horses. When horses sweat, they lose significant amounts of essential electrolytes, including sodium, chloride, potassium, and to a lesser degree, magnesium. Summer Games Electrolyte is formulated to replace these key electrolytes that are lost in sweat during exercise.

FEEDING DIRECTIONS

Mix Summer Games Electrolyte with the daily grain ration. All horses should have free-choice access to a salt block, or loose salt, and fresh clean water.

The amount of electrolyte supplementation will depend on how much the horse sweats. Typically, a normal maintenance intake for horses at rest in hot environments or those being transported in hot weather is 1 ounce per day. Horses at moderate work levels receive 2-3 ounces, and those in heavy training require 3-4 ounces per day. It is recommended that daily doses of 3 or 4 ounces be divided into separate feedings.

RECOMMENDED INTAKE (oz/day):

Level of Training	Normal Environment	Hot, Humid Environment
Rest	0	1
Light	1	1-2
Moderate	2	2-3
Heavy	3	3-4

1 scoop = 1 ounce
